The invention is useful for reducing and inhibiting atherosclerosis. The present sequence is human apolipoprotein (APOAI) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MKAAVLTLAVLPLTGSQARHFWQQDEPPQSPWDRVKDLATVYVDVLKDSGRDYVSQFEGS

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRR) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                       Huntington's disease; osteoarthritis;
Leber's hereditary optic neuropathy; LHON;
mitochondrial encephalopathy lactic acidosis and stroke; MELAS;
myoclonic epilepsy ragged red fibre syndrome; MERRF; cancer;
neuroprotective; nootropic; antidiabetic; anticonvulsant; antiarthritic;
osteopathic; ophthalmological; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.
                                                                                                                  SeqID253.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Glenn GM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The invention discloses a apolipoprotein A-I (apo-A-I) polypeptide or its related polypeptide, apo-A-I fragment T-cell activation inhibitor-like (AFTI) polypeptide, or a fragment or an allelic or splice variant. Apo-A-I and its derivatives are used in regulating T-cell-mediated activation of monocytes. Also disclosed is an antibody produced by immunising an aim a usbel or its fragment. Apo-A-I and a selective binding agent, or its fragment. Apo-A-I is useful for reducing inflammation, interleukin (IL)-lbeta secretion or treating IL-I or TNF-alpha mediated disease in a subject, or for treating IL-I or TNF-alpha mediated disease in a subject. The monocyte activation in a patient, for determining whether a compound inhibits activity or production of apo-A-I, for detecting or quantifying the amount of apo-A-I in a sample, for regulating T-cell-mediated inhibits activity or production of apo-A-I, for detecting or quantifying the amount of apo-A-I in a sample, for regulating T-cell-mediated conformed activity or production of apo-A-I, for detecting or quantifying the amount of apo-A-I in a sample, for regulating T-cell-mediated conformed diseases used and chronic IL-I-conformed diseases used as an immunogen to raise antibodies, for treating acute and chronic IL-I-conformediated diseases used as the pancreatitis, all pancreatitis, and acute as can chronic TNF-mediated diseases such as acute pancreatitis, all pancreatitis, and acute conformed activity or barkingon's disease, porionasis, uveitis, and acute conformediated diseases, pulmonary fibrosis, reperfusion injury, rheumatic diseases, septic shock, systemic lupus erythematosus and thyroiditis.

Chey applications, to test for the presente of apo-A-I, as hybridisation probes in diagnostic assays, for diagnostic applications, to test for the presence of apo-A-I, and hybridisation probes in diagnostic assays, for diagnostic applicating and in therappetures. The sequence presented is the human 18K N-Ferminal and the presented in assamble the presented in a sequence of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                      Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                              The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA01310) that exhibit activity elating to sytokine, cell proliferentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, mematopoiesis regulating activity, issue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel isolated human secreted polypeptides (I) and polynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth and remadeling. (I), (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and responsation of nerve and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, contingent disease, huntington's disease, and amyotrophic lateral solution, (I) is involved in chemotactic or chemokinetic activity, regulation of haematopoiesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers, or periodontal disease. Purthermore, (I) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and fibracians antimed and preserver combined immunodeficiency (SCID), batterial or funcal infertions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             response. The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36311) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-telated disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 REQLGPVTQEFWDNLEKETEGLRQEMSKDLEEVKAKVQPYLDDFQKKWQEEMELYRQK 118

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a membrane scaffold protein (MSP), that self assembles in the absence of phospholipid, with a phospholipid or a mixture of phospholipid, into a nanoscale particle of 5-500 mm in diameter, in an aqueous environment, where the membrane scaffold protein diameter, in an aqueous environment, where the membrane scaffold protein is amphipathic and forms at least one alpha helix. The nanoscale particle comprising MSP is useful for identifying a competitor of binding of a ligand to a receptor protein which is incorporated within the nanoscale particle particle together with MSP, by contacting ansocale particle and a ligand to a receptor protein which a detectable ligand to produce nanoscale particle. Sound detectable ligand, contacting the bound ligand with a test compound, and measuring detectable ligand released from the particle, such that a competitor of ligand binding is identified when contacting the bound ligand results in release of the detectable ligand. The cincenton is useful for the incorporation of additional hydrophobic protein molecules. The nanoscale particle can form tags for purification and physical manipulation of disks such as entities for rapid and reproducible assay and crystallisation. The nanoscale control of particle and MSP are useful in biotechnology, pharmaceutical industries and in research areas. The nanoscale particle is useful for structure/function correlation, structure determination, bioseparation and drug discovery. The present sequence is MSPID5-6 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MSKDLEEVKAKVQPYLDDFQKKWQEEMELYRQKVEPLRAELQEGARQKLHELQEKLSPLG 145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New membrane scaffold protein for forming nanoscale particles, useful in biological research, self assembles with(out) phospholipids into a nanoscale particle in an aqueous environment.
                              Human, membrane scaffold protein; MSP; phospholipid; nanoscale particle; hydrogel; gold biosensor surface; reproducible assay; crystallisation; biotechnology; pharmaceutical industry; structure determination; bioseparation; drug discovery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26 GRDYVSQFEGSALGKQLNLKLLDNWDSVTSTFSKLREQLGPVTQEFWDNLEKETEGLRQE 85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    54

The invention relates to human polynucleotides (AAI79941-AAI91841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymeries in other cell populations. The polymeries or peptide therapy. The polymeries have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       preventing diagnosing disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 REQLGPVTQEFWDNLEKETEGLRQEMSKDLEEVKAKVQPYLDDFQKKWQEEMELYRQKVE 120

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used a suntitional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or AMU29510-AAMJ3304 represent the amino acid sequences of novel human secreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding a range of human polypeptides, useful in genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               REQLGPVTQEFWDNLEKETEGLRQEMSKDLEEVKAKVQPYLDDFQKKWQEEMELYRQK 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and simulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU3304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 43 NLKLLDNWDSVTSTFSKLREQLGPVTQEFWDNLEKETEGLRQEMSKDLEEVKAKVQPYLD 102

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             원
                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predasposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon stimulation; as anti-inflammatory agents; and in treatment of leukaemias.

ANURSIO ANURSIO Appresent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; membrane scaffold protein; MSP; phospholipid; nanoscale particle; hydrogel; gold blosensor surface; reproducible assay; crystallisation; biotechnology; pharmaceutical industry; structure determination; bioseparation; drug discovery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 DEPPQSPWDRVKDLATVYVDVLKDSGRDYVSQFEGSALGKQLNLKLLDNWDSVTSTFSKL 60

The invention relates to a membrane scaffold protein (MSP), that self assembles in the absence of phospholipid, with a phospholipid or a mixture of phospholipids, into a nanoscale particle of 5-50 nm in diameter, in an aqueous environment, where the membrane scaffold protein diameter, in an aqueous environment, where the membrane scaffold protein c samphipathic and forms at least one alpha helix. The nanoscale particle comprising MSP is useful for identifying a competitor of binding of a comprising MSP is useful for identifying a competitor of binding of a comprising MSP is useful for identifying a competitor of binding of a competitor protein with MSP, by contacting nanoscale particle and a cereptor protein with a detectable ligand to produce nanoscale particle. Sound detectable ligand contacting the bound ligand with a test compound, and measuring detectable ligand released from the particle, such that a competitor of ligand binding is identified when contacting the bound ligand results in release of the detectable ligand. The cinvention is useful for the incorporation of additional hydrophobic or partially hydrophobic protein molecules. The nanoscale particle can form cage for purification and physical manipulation of disks such as in charties and MSP are useful in biotechnology, pharmaceutical industries and in research areas. The nanoscale particle is useful for structure determination, bioseparation and drug current sequence is MSP1D4-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              86 MSKDLEEVKAKVQPYLDDFQKKWQEEMELYRQKVEPLRAELQEGARQKLHELQEKLSPLG 145

New Apo AI polypeptide(s) and anti-Apo antibodies - used to detect Apo Ai in vascular fluid samples and increase LCAT-mediated cholesterol esterification in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The peptides represented in AAR20164-65 are capable of immunologically mimicking an Apo AI epitope. They are useful in diagnosis and detection of Apo AI in fluids and for preparing anti-Apo AI antibodies. It is useful in therapeutic methods for increasing LCAT- mediated cholesterol esterification in humans. The Apo AI polypeptide is selected from the peptides indicated in the features and includes amino acids 13-28 defining a conserved native epitope on Apo AI capable of immunoreacting with monoclonal antibody MAB AI-11.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, encephalopathy lactic acidosis and stroke (MELAS), mycolonic epilepsy ragged red fibre syndrome (MERR) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic,

The peptides represented in AAR20164-65 are capable of immunologically mimicking an Apo AI epitope. They are useful in diagnosis and detection of Apo AI in fluids and for preparing anti-Apo AI antibodies. It is useful in therapeutic methods for increasing LCAT- mediated cholesterol esterification in humans. The Apo AI polypeptide is selected from the features and includes amino acids 6-21 defining a conserved native epitope on Apo AI capable of immunoreacting with monoclonal antibody MAB AI-4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ3691) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and bolypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                        New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of the

Novel human polypeptides and polynuclectides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation.

Claim 10; Page 625; 2508pp; English.

Sequences harstvoer-passes, represent 4534, and sequences ABN75054ABN79587 represent cDNAs encoding them. The invention also encompasses
CO Polypeptides at least 80% identical to the ORFY-ORF4534 (collectively
referred to as ORFX) proteins, polymucleotides at least 85% identical to
the ORFX nucleic acid sequences, vectors and host cells comprising ORFX
CO Polymucleotides, the recombinant production of ORFX proteins, antibodies
competific for ORFX proteins, methods of detecting ORFX polymucleotides and
polypeptides, methods of screening for modulators of ORFX expression or
competitive, and methods of screening individuals for a predisposition to an
ORFX-associated disorder. The ORFX proteins of the invention have a wide
competitive and disorder. The ORFX proteins of the invention are used
coll differentiation, immune modulation, haematopoiesis regulation,
clissue growth, anglogenesis, activin, haematopoiesis regulation,
clissue growth, anglogenesis, activin, thrombolytic activity,
combinetic activity, and may also be involved in the determination
of bodily characteristics, fertility and behaviour. ORFX proteins,
cother proliferative disorders may be used in the treatment of cancers,
cother proliferative disorders such as epilepsy and Alzheimer's disease,
corrections of disorders such as epilepsy and Alzheimer's disease,
corrections. organ transplantation, disorders of tissue growth and regeneration, disorders of tissue growth and regeneration, disorders of tissue growth and regeneration, storage diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester storage disease, and infectious diseases caused by viral, bacterial, fungal and other pathogens. OFFX nucleic acids may also be used as source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases Sequences ABP31028-ABP35561 represent 4534 novel human proteins
